

Beva® Matte Varnish

Beva® Matte Varnish is a stable, colorless, and reversible varnish made from cyclohexanone resins dissolved in pure, low-aromatic solvents and a dispersed matting agent.

Beva® Matte Varnish was designed to help in the consideration of modern paintings where a matte finish is desired. It was formulated to achieve the following:

- *Lowest possible solvent action on the original paint. It can be removed with aliphatic solvents.
- *Maximum resin content for best coverage.
- *Minimum yellowing and cross-linking of resins over time.

Beva® Matte Varnish can be mixed with Beva® Finishing Varnish in any desired proportion to provide intermediate degrees of matte finish.

Instructions for use:

The container of varnish should be shaken very well to incorporate the matting agent which settles to the bottom as the can sits. The varnish should be shaken very well to insure matting agent is uniformly distributed through the varnish, this will take approximately one to three minutes.

A good retouch varnish can be prepared by mixing equal parts of the Beva® Matte Varnish with VM&P naphtha. In this concentration it can be easily sprayed with a spray gun or hand sprayer.
